DETAILED ACTION

Election/Restriction

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-7, drawn to a process for *in vivo* transgene expression comprising delivery of a non-viral, linear nucleic acid with blunt or sticky ends to a cell and expressing the nucleic acid, classified in class 514, subclass 44.
- II. Claims 8-17, drawn to a process for *in vivo* transgene expression comprising delivery of a non-viral, linear nucleic acid with ends derived from Tn5 to a cell and expressing the nucleic acid, classified in class 514, subclass 44.
- III. Claims 18-20, drawn to a process for transgene expression comprising delivery of an expression cassette to a cell and expressing the nucleic acid, classified in class 435, subclass 325 and class 514, subclass 44.

The inventions are distinct, each from the other because of the following reasons:

Inventions III and I-II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as

Art Unit: 1632

claimed because as noted in the instant claims various types of blunt/sticky ends (group I) or Tn5 sequences (group II) are not required for making or using the expression cassette (group III). The subcombination has separate utility such that vectors containing Tn5 flanked sequences could be excised using the appropriate recombinases (group II) and the non-viral linear nucleic acid (group I) could comprise other genes or selectable makers besides those in a simple expression cassette for a transgene (group III).

Because these inventions are distinct for the reasons given above, restriction for examination purposes as indicated is proper.

These inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, and the search required for one group would not be coextensive or adequate for that required for another group. Therefore, restriction for examination purposes as indicated is proper..

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any

Art Unit: 1632

amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
